Short biography:

I began my significant studies at High school of Senta. It was there that I discovered my interest in computer science and mathematics. Initially, I learned C++ and Java, later I modified PC games and fixed malfunctioning operating systems. This passion led me to enroll at the Faculty of Sciences, Novi Sad. During my university years, I had several jobs in this field, where I had the opportunity to work with excellent people in Scrum environment. After obtaining my IT Bachelor's degree, I started to grow my knowledge in other fields such as marketing, finance and law.
